

## Elator® for Kids

Elator® for kids consists of a walker, but with kids-size and a battery-powered basic board.

Designed for children and young people whose mobility is permanently or temporarily impaired.

Elator® Kids enables communication at eye level with your friends during your leisure activities.

In a nutshell: „Major boost to your quality of life“

**unique – cool – innovative**

### Mobile and active to face life's daily demands

Elator® combines the safety of a walker with the mobility of an electric vehicle.

Go farther with Elator® Take a stroll to destinations you could no longer reach on foot.

Acceptance studies show that Elator® makes everyday chores a breeze and helps improve the quality of life.

in a new way every day

Elator® Micromobility

With its electric motor, Elator® also pertains to the much-discussed topic of micromobility, i.e. the inner-city use of micro-electric vehicles and its particular importance.

Elator® users expand their mobility at will while supplementing or replacing their usual means of transport.

Basically, Elator® works as a regular walker for walking and resting. Users can switch between the walking and riding position with a handle.

Elator® in riding position

Elator® Mobile and active

The combination of walker and battery-powered platform makes Elator® a stable, steerable vehicle. If the footpath is too arduous, just fold down the platform and continue on the sidewalk at up to 6km/h.

- Battery-powered riding complements and expands the walker’s usability
- Enjoy great stability by placing both hands on the handles when walking or travelling
- Easy and continuous speed control through a thumb throttle lever on the handle

Please contact us to discover our range of Elator® models.

Elator® at a glance
